Champions® Company Portrait

***WELCOME
TO THE
FUTURE***

Champions®

Philosophy

Since 2006, the company Champions has evolved into the hub of excellence in tried and tested implant systems and currently ranks among the Top 5 implants on the market in Germany. Unlike some institutions and companies, the visionary Dr. Nedjat goes far beyond the limits of Dental Implantology with his system and expands implantologists' horizons. Thanks to this philosophy combined with Dr. Nedjat's expertise and visions, the company continues to thrive and grow.

The Champions company is delighted to share its vision and philosophy of "modern Implantology", the Minimally Invasive Implantology Method "MIMI". Without relying on other institutions, the company is pleased to provide continuing education courses on MIMI. This minimally invasive Implantology course is designed to teach you the necessary knowledge and skills to practice Implant Dentistry that allow you to incorporate implants into your practice safely with confidence and success.

The course program includes:

- CIPC-Implantology Curriculum of VIP-ZM e.V., an introduction to minimally invasive Implantology
- Day courses for participants who wish to change systems or incorporate the Champions system into their practice
- Intensive courses for Champions users, e.g. on immediate implantation, sinus lift "IDS"
- Closed WhatsApp and telegram groups for sharing questions and answers concerning Implantology and Prosthodontics, also in the evenings and on the weekends
- Please feel free to call our Customer Service should you require assistance, e.g. with your orders, please feel free to call our Customer Service during our opening hours
- Available publicity and information material for your patients
- Film and picture material for your website
- Comprehensive Implantology database with videos, live surgeries, national and international studies, Instructions for Use
- Supervisions with experienced Implantologists in your dental office

This concept reflects the Champions philosophy, and Implantology can be integrated into treatment services offered in general dental offices.

See for yourself!

Prof.

(Assoc. Dental Science & Research, India)

Dr. med. dent.

Armin Nedjat
